

How to filter and group in the Diagnoses and Pathology clinical domains

The flexibility to arrange data to suit your needs is critical. This guide provides you information on filtering and grouping within the Diagnoses and Pathology clinical domains.

- [Where are the key group and filter elements](#)
- [How to Increase the Date Range of viewable data](#)
- [How to turn Group function off, and how it changes the data view](#)

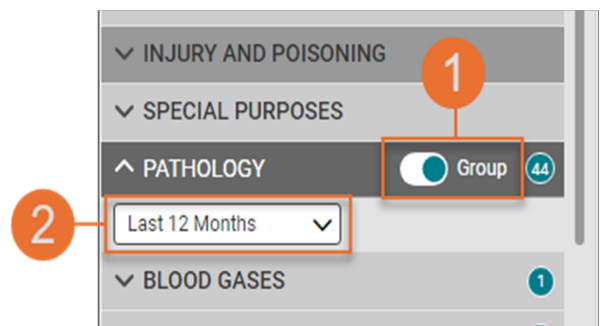

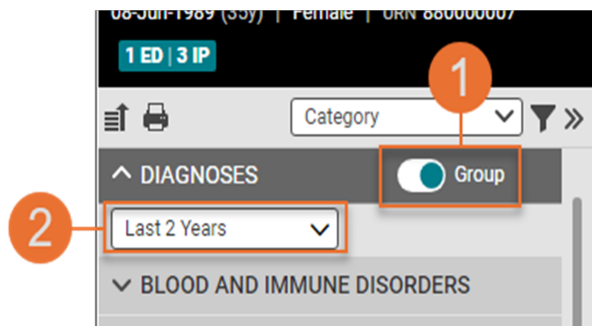

Where are the key group and filter elements

- 1 Expand the Diagnoses and Pathology groups and locate the Date Range choice field.

By default, the Date Range choice field is set to Last 12 months.

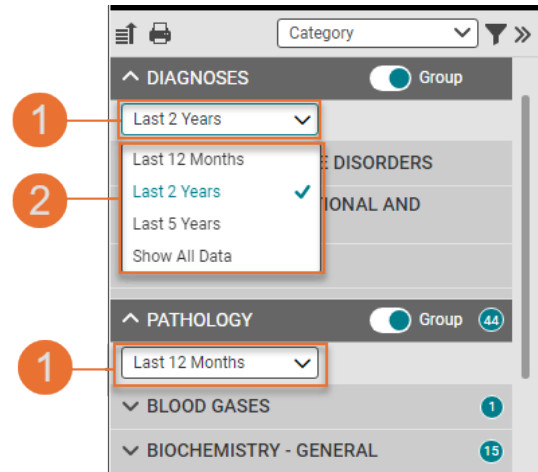

- 2 Locate the Group toggle button.

By default, this is set to Group.

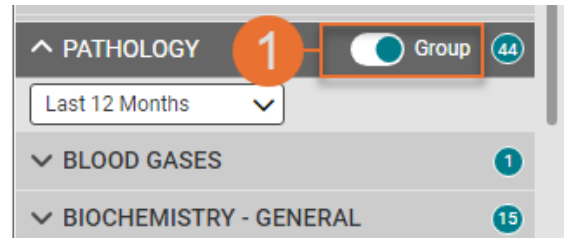

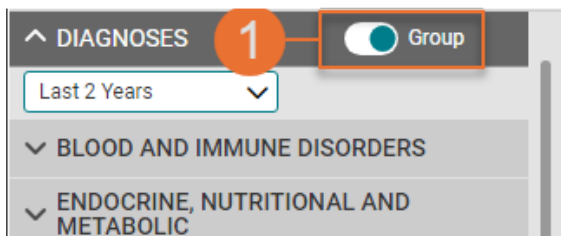

How to Increase the date range of viewable data

- 1 Click on the Date Range choice field.
- 2 Select one of the available options.

How to turn Group function off, and how it changes the data view

- 1 Click on Group toggle button.

- 2 The Group toggle button displays as being off.
- 3 The Diagnoses and Pathology cards are now presented with data from most current date.

The Group function can be turned back on by again clicking on the Group toggle button.
