Important Update: Introducing MIMS Crush

To all Clinicians Health Channel users

We are writing to inform you of an important update to your eMIMS subscription.

From 24th March 2026, the Don't Rush to Crush add-on module will be replaced with the MIMS CRUSH module. To support continuity of your clinical workflow, a new replacement module, "**MIMS CRUSH**", will be made available within your existing eMIMS environment from this date.

What's included in MIMS CRUSH?

- **Seamless clinical workflow**
The same trusted workflow, providing guidance on the safe administration of oral medications for patients with swallowing issues or enteral feeding requirements.
- **Product images and dimension tables**
A quick reference view showing brands with available images and actual dimensions for easy comparison.
- **Monthly updates to product information**
Updated regularly to include currently available brands, ensuring you always have the latest product options for substitution.
- **Integrated links to the MIMS Abbreviated Monograph**
Providing easy access to key prescribing and administration information.
- **Drug interaction links**
Access to drug-food or herbal medicine interactions to support clinical decision making.

All of these features are included with no changes to your workflow
